Location Based Teleprotection & Mobile Patrol Management

Security Cloud, a project funded by the Office of the Government Chief Information Officer (OGCIO), is a cloud-based teleprotection management system. The system is initiated by the Chamber of Security Industry Limited and jointly developed with the support of Hong Kong Linux Industry Association and C&T Solutions, using the open source application. Security Cloud, with its two key functions and several auxiliary functions, is purposely developed to help the security industry enhance work and management efficiency, and at the same time protect the safety of the duty security personnel.

Two Key Functions :

- Teleprotection Management
- Supervisory Visit Management

Auxiliary Functions :

- Staff Profile Management
- Patrol Route Management
- Site Management
- Reports
- Duty Management
- Rank Management
- Data Collection
- Electronic Map Monitoring Staff Location

Characteristics :

- Manage and apply anywhere anytime
- Collect and analyse all data
- Support multi-site operation
- Strengthen communication and interaction with on-site security personnel
- Provide one-stop service for customers in managing site operation
- Cost-saving
